Year 4/5 Mathematics Yearly Overview

Moved Au1Wk5 and Au1Wk6 around so that in Wk5, children are using their knowledge of addition, subtraction and inverse when solving time problems.

Moved Sp1Wk4 to Sp1Wk2 so that the negative numbers can be applied in the coordinate grids in position and direction unit. Y5 expectation is to only use the first quadrant but it is an easy and obvious extension to move the children on to two or four quadrants, especially if following a unit that includes negative numbers.

Moved Sp2Wk2 to Sp2Wk1 so that children can use their place value knowledge when deriving related multiplication and division facts over the following two weeks.

A bit of tweaking around the Geometry and Position learning across Spring term – position was down to be covered twice which might have been too much at the expense of something else.
